Week 49 Deep Research -- Full Report

Date: Sunday, August 16, 2026 -- orders revised Monday, August 17 after live pre-open verification (Section 6a)

Week: 49

1. RESTATED RULES

Three amendments authorized 2026-08-15 for the final stretch, because the constraint set -- not the market -- had become the binding limit on deployment (Week 48: 8 of 15 candidates excluded by rule, nothing investable, 54% cash):

Health Care sector cap raised 2 -> 3. All other sectors remain capped at 2.

Universe

5e9. Unive

Unchanged: 15% cash floor · 5% risk-per-trade · 30% single-name cap · all excluded classes (ETFs, closed-end funds/BDCs, SPACs, ADRs, units/warrants) · stop-loss requirements and range checks (day's low + ATR, >=1.5xATR clearance, never lower a stop, de-risk by size not tightness) · every entry-discipline rule (post-earnings cooldown, distance-from-base, days-1-3 breakout avoidance, thesis-input freshness, screener score = sourcing at 2/5 floor) · price-data integrity (browser for live quotes and breaking news).

2. RESEARCH SCOPE

Retrieved: 2026-08-16 ~20:25 ET. Closes as of Friday 2026-08-14 (settled). Screener regenerated on the widened universe -- 1,593 names, 403 rows dropped by sanity checks, 1 identity mismatch (the corruption guards continue to work).

Live sources: WWW (TradingKey/Yahoo/StockStory -- Q2 revenue $506M +7%, guidance raised), PAR (TipRanks/GuruFocus/Investing.com/StockStory -- Q2 revenue $133M +19%, ARR $338M, guidance raised), CADL (carried from Week 45 verification: StockTitan/Seeking Alpha/AUA data -- CAN-2409 Phase 3, BLA Q4 2026).

Checks: excluded-class screen, sector-cap map under the new 3-name healthcare limit, distance-from-base and breakout age, ATR range checks, cash-floor math.

3. CURRENT PORTFOLIO ASSESSMENT

Ticker	Role	Entry Date	Avg Cost	Current Price	Current Stop	Conviction	Status
ATRC	Health Care -- post-catalyst	2026-07-13	$34.30	$44.30 (+29.2%)	$39.50 (locks +15.2%)	4/5	KEEP -- +30% partial deferred
TILE	Cons. Cyclical -- beat-and-raise	2026-06-15	$32.10	$37.96 (+18.3%)	$35.75 (locks +11.4%)	4/5	KEEP
ARDT	Health Care -- post-catalyst	2026-07-31	$10.80	$10.91 (+1.0%)	$10.35	3/5	KEEP

Equity: $744.08 · Cash: $404.79 (54.4%) · Gap: ?4.8% ($744.08 vs $781.45) · TWR alpha +0.28%

4. CANDIDATE SET

Ticker	One-Line Thesis	Key Catalyst	Confirmation	Liquidity Note
PAR	PAR Technology -- restaurant SaaS: revenue +19% to $133M, ARR $338M +17%, adj. E	Q2 reported 8/6; SaaS transition compounding	CONFIRMED (TipRanks + GuruFocus + Investing.com + StockStory)	$788M; Technology -- empty sector
CADL	Candel Therapeutics -- CAN-2409 Phase 3 prostate, 39% DFS improvement (58-mo fol	BLA submission Q4 2026	CONFIRMED (Week 45 verification: StockTitan + Seeking Alpha + AUA)	$897M; unblocked by the new 3-name healthcare cap
WWW	Wolverine World Wide -- Q2 revenue $506M +7%, adj. EPS +14% to $0.40, op margin	Q2 reported ~8/13	CONFIRMED (TradingKey + Yahoo + StockStory)	$1.7B; day 2 of a +16.4% move

Evaluated & not selected (one line each):
- WWW (#3) -- the best fundamental story on the board (growing revenue, margin expansion, guidance raised on four metrics), but closes went $18.06 -> $19.88 -> $21.03: day 2 of a +16.4% breakout, the exact FOXF/ARLO pattern. Queued #1 for Week 50 on consolidation.
- BTCS (#1) -- $56M nano-cap crypto-adjacent financial at $1.12; fails liquidity comfort and quality.
- ANRO (#2) -- hottest healthcare momentum (+24.1%/20d, +13.6%/5d) but vertical, and the 3rd healthcare slot is better spent on CADL's dated BLA catalyst than on an extended chase.
- SFNC ($3.5B) / RNST ($4.0B) -- newly eligible regional banks, but momentum is negligible (+3.7%, +1.4%/20d) and both show negative relative strength vs IWM. The widened ceiling brought them in; it didn't make them attractive.
- MGTX / NUVB / AORT / CCCC -- healthcare; slot 3 goes to CADL. NUVB is also below its 20-day SMA.
- NPWR (#9) -- +26.6%/20d on 5.3x volume, but a $438M pre-revenue-style industrial; too speculative for a 4-week horizon.
- UMH (#12) -- REIT, modest momentum, no catalyst.
- VUZI (#13) -- +35.4%/20d, $262M, BBW 0.353 (extreme volatility); a lottery ticket, not a position.
- KRP (#14) -- energy royalties, flat momentum, negative RS.

Net: initiate PAR and CADL; queue WWW.

5. PORTFOLIO ACTIONS

- Initiate: PAR -- 8 shares (~$153, 20.5% of equity). Fills the empty Technology sector. Clean setup: no vertical gap (closes ground higher 17.43 -> 19.05 over five sessions), three consecutive higher lows (16.82 -> 17.65 -> 18.38), +11.1% above the 20-day SMA (limit +20%), and 8 sessions past its 8/6 print so the cooldown is clear. Revenue +19% with raised guidance is genuine growth -- the opposite of the declining-revenue names (TDAY, FOXF) that have cost us.
- Initiate: CADL -- 10 shares (~$118, 15.8% of equity). Takes the newly available 3rd healthcare slot. This was my Week 45

queue name at $10.18; the thesis (CAN-2409 Phase 3, 39% DFS improvement, RMAT, BLA Q4 2026) is unchanged and now investable under the amended cap.
- Keep: ATRC (partial deferred, stop locks +15.2%), TILE, ARDT -- all stops correctly ranged; no changes.
- Add to winners: considered under the new permission and declined. TILE trades above its $36-37 consensus PT and ATRC sits at +29% just under its partial trigger; adding to extended winners is the "buy the post-print high" error. The permission is better spent on a pullback.
- Exit / Trim: none.

---

6. EXACT ORDERS

Order 1 -- Initiate PAR (revised 8/17)
- Action: buy · Ticker: PAR · Shares: 8
- Order Type: limit · Limit Price: $18.55 (was $19.20 -- repriced to the live $18.46 print)
- Time in Force: DAY · Intended Execution: 2026-08-17
- Stop Loss: $16.50 (was $17.05) -- 1.73xATR below the live price
- Stop Limit: $16.35
- Range check: ATR(14) $1.135 (5.96%) · the original $17.05 fell to 1.24xATR once PAR dropped to $18.46 -- below the 1.5x minimum -- so the stop was widened · max loss 8 x $2.05 = $16.40 (2.2% of equity)
- Order-side check: $16.50 < $18.46 (live, 8/17) [OK]
- Special -- skip condition: do not buy if PAR closes below $18.38. That is the last of the three higher lows ($16.82 -> $17.65 -> $18.38) the entry was built on; a close beneath it breaks the structure (the same test that disqualified FOXF). The decline is late-session and unexplained, so waiting for the close costs nothing and resolves it.
- Rationale: 18.7% revenue growth + raised guidance in an empty sector; the pullback improves the entry to +7.6% over the 20-day SMA (was +11.1%).

Order 2 -- Initiate CADL (revised 8/17)
- Action: buy · Ticker: CADL · Shares: 10
- Order Type: limit · Limit Price: $11.50 (was $11.85 -- repriced to the verified pre-market level)
- Time in Force: DAY · Intended Execution: 2026-08-17
- Stop Loss: $10.70 (unchanged) -- just above the 10-day low cluster ($10.35-10.50)
- Stop Limit: $10.55
- Range check: Friday low $11.04 · ATR(14) $0.577 (4.92%) · stop is 1.77xATR below [OK] · max loss 10 x $0.80 = $8.00 (1.1% of equity)
- Order-side check: $10.70 < $11.48 (live, 9:28 AM EDT 8/17) [OK]
- Special: pre-market ?2.05% at the rule's threshold but with no adverse news, so the entry stands at the verified price rather than Friday's close. Note CADL rose +10.5% on 8/13 (its earnings date) then consolidated -- cumulative move sits just under the 10% breakout-avoidance threshold.
- Rationale: dated BLA catalyst (Q4 2026), Phase 3 data in hand, funded into 2028; takes the newly permitted 3rd healthcare slot.

6a. PRE-OPEN VERIFICATION OUTCOME (2026-08-17)

Both entries were verified live before execution, per price-data-integrity.md. The check materially changed both orders.

PAR -- the pre-market signal was noise. The first scan showed $19.26, +1.10% (5:26 AM EDT), which read as a constructive open. A re-scan closer to the bell returned the same 5:26 AM timestamp from two independent sources, and MarketWatch supplied the reason: before-hours volume of 332 shares. There had been no trades since -- the print was a single tiny transaction carrying no information. The actual session opened and moved the other way: $18.46, ?3.25%.

Lesson recorded: read extended-hours volume alongside the timestamp. A 332-share print looks like a price but is not one, and it nearly anchored a limit $0.80 above where the stock actually traded.

Additional facts surfaced by the live pages:
- PAR -- analyst PT $25.31 (+37% from $18.46), Buy; forward P/E 17.4; revenue TTM +18.8% [OK]. But the 52-week range is $11.59-$54.62: PAR is ~65% below its high with GAAP EPS ?$1.77. This is a beaten-down grower, not a leader -- it doesn't break the thesis (ARR compounding, guidance raised, cheap on forward earnings) but it holds conviction at 4/5 rather than higher.
- CADL -- Strong Buy, PT $20.88 (+78%), the largest upside on the board. 52-week range $4.35-$11.95, i.e. trading near its high -- the mirror image of PAR.
- No adverse news on either name (StockTitan feeds checked live; PAR's latest item is still the 8/6 Q2 release).

Net effect: the pair is a deliberate barbell -- PAR a fallen grower bought on a pullback, CADL a momentum biotech bought near highs on a dated catalyst -- rather than two versions of the same bet.

---

7. RISK AND LIQUIDITY CHECKS

Post-trade (at the revised 8/17 limits):

Holding	Value	% of Equity
TILE	$151.84	20.4%
ATRC	$132.90	17.9%
PAR	$148.40	19.9%
CADL	$115.00	15.5%
ARDT	$54.55	7.3%
Cash	$141.39	19.0%

- No position >30% [OK] · Cash 19.0% > 15% floor [OK] (the lower entry prices left ~$9 more in reserve)
- Sectors: Health Care 3 (ATRC, ARDT, CADL -- at the new cap [OK]), Cons. Cyclical 1, Technology 1 [OK]
- Binary-event plays: 0 [OK]
- Combined new-position risk: $16.40 + $8.00 = $24.40 ? 3.3% of equity (down from $28.70 at the original limits); aggregate across all five holdings if every stop fired: ? ?2.2% (the three incumbents lock gains)
- Order sizes are trivial fractions of ADV for both names [OK]
- If the PAR skip condition triggers (close below $18.38): 4 positions, cash $289.79 (38.9%), and PAR returns to the queue alongside WWW.

---

8. MONITORING PLAN

- PAR -- honor the 5-day minimum hold. Watch ARR trajectory and the SaaS-transition narrative; GAAP is still lossmaking (?$0.41/sh) so the story rests on ARR + adjusted EBITDA, which is a risk if sentiment shifts against unprofitable software.
- CADL -- BLA submission Q4 2026 is the event; watch for FDA interaction news and any financing (a raise would pressure the stock). Clinical-stage binary risk is real; sized at 15.9% accordingly.
- WWW -- queued #1. Enter on a higher-low base after the +16.4% move digests, or a pullback toward the 20-day SMA (~$19.35). Fundamentals are the strongest of the three; only the entry timing is wrong.
- ATRC -- +30% partial deferred; re-evaluate if conviction drops below 4/5, the position exceeds 30% of equity, or two earnings cycles pass without the doubled guidance showing in results. Stop $39.50 sits $0.50 above the 5-day low -- a known tight spot.
- TILE -- +30% partial level $41.73; stop $35.75 at 1.27xATR is tighter than guideline (deliberate).
- Regime -- IWM $305.09 vs 50-day ~$291; comfortable. A break below freezes new momentum initiations.

---

9. THESIS REVIEW SUMMARY

(Saved separately as Week 49 Summary.md.)

ATRC -- KEEP | 4/5. +29.2% and knocking on the $44.59 partial trigger, which stays deferred: the FY EPS guidance doubling is a genuine new catalyst, the $39.50 stop locks +15.2%, the position is 17.9% of equity, conviction is 4/5 -- all four deferral criteria hold. With 54% cash, converting the best performer into more idle cash is the wrong direction.

TILE -- KEEP | 4/5. +18.3%, holding its post-earnings gap above the $36-37 consensus PT. Stop $35.75 locks +11.4%.

ARDT -- KEEP | 3/5. +1.0% on the 5-share residual. The mixed Q2 (EBITDA ?32% YoY) keeps conviction capped; stop $10.35.

PAR -- INITIATE | 4/5. The cleanest setup this experiment has produced in weeks: revenue +19% to $133M, ARR $338M (+17%), adj. EBITDA above the guidance high end, and FY guidance raised -- actual growth, not a cost-cut story on a shrinking base. Technically it ground higher rather than gapping (three consecutive higher lows, +11.1% over the 20-day SMA), and it is 8 sessions past its print. Fills the empty Technology sector. Bear case: GAAP still lossmaking (?$0.41/sh), so it's an ARR-and-adjusted-EBITDA story vulnerable to a sentiment shift against unprofitable software.

CADL -- INITIATE | 3/5. The Week 45 queue name, finally investable under the amended healthcare cap. CAN-2409 Phase 3 in localized prostate cancer showed a 39% improvement in disease-free survival at 58-month median follow-up, carries RMAT designation, and the BLA submission is guided for Q4 2026, with cash into 2028. Bear case: clinical-stage binary -- a BLA delay or an FDA question resets the story, and biotech financings dilute. Sized at 15.9% with a 1.77xATR stop.

Overall portfolio thesis. Gap ?4.8%, TWR alpha +0.28%, cash 54.4% -- and that cash was the problem. Two sessions this week made the mechanic explicit: the book gained nothing while the S&P-equivalent rose, because half the portfolio earns zero. With ~4.5 weeks left, holding cash was a guaranteed way to finish behind.

So this week's decisive act wasn't a trade -- it was amending the constraints that were blocking deployment. Raising the healthcare cap to 3 and the universe ceiling to $5B nearly doubled the screenable universe (856 -> 1,593) and directly unlocked one of the two initiations (CADL). Notably, the ceiling change did not produce a flood of quality -- the new $2-5B entrants (SFNC, RNST) screened poorly with negative relative strength -- which is itself useful evidence: the micro-cap tilt wasn't the constraint that mattered most; the sector cap was.

The deployment is PAR (real growth, empty sector, non-gapped entry) and CADL (dated BLA catalyst), taking the book to 5 positions and 17.8% cash. WWW is deliberately left on the table -- the strongest fundamentals of the three, but day 2 of a +16.4% move, and chasing that is precisely what cost us on PHAT, LXU and nearly on FOXF. It's queued for Week 50 on consolidation. Three weeks to run: the cash is finally working, the winners are protected at +11% to +15% locked, and the remaining edge has to come from the two new positions doing what their fundamentals say they should.

---

10. CONFIRM CASH AND CONSTRAINTS

- Starting cash: $404.79 · PAR: ?$148.40 · CADL: ?$115.00 -> Ending cash: $141.39 (19.0%) -- above the 15% floor [OK]
- Positions: 5 of max 6 [OK] · Sectors: Health Care 3 (at the amended cap), Cons. Cyclical 1, Technology 1 [OK]
- Binary plays: 0 [OK] · Largest position: TILE 20.4% < 30% [OK]
- Amendments applied and documented in Start Your Own/portfolio_rules.md and screener.py [OK]
- All stops range-checked -- and PAR's re-checked and widened on 8/17 when the price drop pushed the original level inside the noise band [OK] · Breakout-age test applied to all three finalists [OK]
- Pre-open verification completed 8/17 via browser (Section 6a); both limits repriced to verified live prices [OK]
- Note: orders are recommendations -- real only after broker execution with actual fills, which I then log.

Week 49 Full report generated 2026-08-16 by Claude Code (Aggressive posture, amended constraints). Closes as of 2026-08-14; catalysts verified 2026-08-16.
