

Week 52 Deep Research -- Micro-Cap Portfolio (FINAL)

Date: Monday, 2026-09-07 (Labor Day, markets closed) | Week: 52 of 52 | Runway: ends 2026-09-18 -- 9 sessions remain

Session d
positions -

1. RESTATED RULES

- US-listed common stock, market cap <= \$5B. No ETFs, CEFs/BDCs, SPACs, ADRs, units/warrants.
- Cash floor 8% · risk-per-trade <=5% · single-name ceiling 30% · sector cap 2 (healthcare 3)
- Binary event play: max 1 position, <=15% of equity.
- Stops mandatory. Anti-ratchet: no raise under 0.5xATR, and it must leave >=1.5xATR of room.
- Mechanical restoration: a stop drifting below 1.5xATR on price alone may be reset once per position. ATRC, PAR and TILE have used theirs; CADL has not.
- PRV gate: browser-fetch the live quote page before any buy/sell/trim/add.
- Thesis-input freshness: any commodity/rate/FX-dependent thesis requires the driver's current level and direction.

2. RESEARCH SCOPE

Retrieved 2026-09-07, 21:25-21:40 EDT, with markets closed for Labor Day. All prices are Friday 9/04 settled closes plus verified after-hours prints -- no intraday ambiguity this week.

Check	Method	Result
Data currency	--check-data-current	Passes -- last completed session 9/04
Holdings + candidates	Browser -> stockanalysis.com	ATRC, PAR, CADL + TYRA, VTS, DAN, NAVI, GNW, ITGR
Oil driver (VTS)	yfinance CL=F / BZ=F / XLE	WTI \$92.45, +7.8% 5d, +12.6% 20d
Screener	screener.py	15 candidates

Screen quality note: this week's watchlist is the weakest of the final stretch -- 20-day momentum spans just +1.1% to +13.7%, against +11% to +34% on the Week 50 screen, and the list is dominated by low-beta financials and insurers. That is a stalled tape, and it materially constrained what was available to buy.

3. CURRENT PORTFOLIO ASSESSMENT

Equity \$772.00 · Cash \$272.17 (35.3%) · S&P-equivalent \$774.71 · Gap ?0.35% · TWR alpha +5.71%

Ticker	Role	Entry	Avg Cost	Price (9/04)	Stop	Conviction	Status
ATRC	Core winner	2026-07-15	\$34.30	\$51.52 (+50.2%)	\$48.50	5/5	KEEP
PAR	Growth	2026-08-17/28	\$19.05	\$19.77 (+3.8%)	\$17.05	4/5	KEEP
CADL	Catalyst	2026-08-17	\$11.43	\$12.78 (+11.8%)	\$12.35	3/5	KEEP

ATRC -- +50.2%, the position that carried the book. Three target raises in twelve days (BTIG \$55, Piper \$60, Needham \$64), all Buy/Overweight, on the STS quality metric and the BoxX-NoAF trial. The +60% partial trigger is \$54.88, 6.5% away. Stop

\$48.50 locks +41.4%. Worth restating: Needham attributed its raise to peer multiple expansion, and BoxX-NoAF data lands H1 2027 -- outside this experiment. This is a re-rated multiple, not a delivered fundamental, which is why the stop matters more than the target.

PAR -- the best fundamental profile in the book: revenue +18.8%, forward PE ~16.8, Buy with PT \$25.31 (+28%). Rose +4.60% on Friday. At 28.2% of equity it is \$14 from the 30% cap -- no adds possible.

CADL -- +11.8%, Strong Buy, PT \$21.00 (+64%), beta ?0.50. Stop \$12.35 sits at ~0.5xATR on a 6.7%-ATR name, so it remains the likeliest exit. CADL still holds its unused restoration allowance, deliberately preserved: the CAN-2409 BLA is guided for Q4 2026, outside the runway, so buying room would purchase option value on an event that cannot occur in time.

No stop changes are available. Every trailing floor either sits below its stop or fails the anti-ratchet minimum -- the same result as 9/03, and the rule working as designed.

4. CANDIDATE SET

Ticker	Sector	Thesis	Catalyst	Verdict
VTS	Energy	Non-operated Williston/Rockies oil, revenue +7.9%, 9.8% yield	Oil at \$92.45, +12.6% in 20 days	[OK] BUY
TYRA	Healthcare	FGFR3 precision oncology, Strong Buy PT +77%	SURF302 Phase 2 data, Sept 9	[!] Declined -- see \$5
DAN	Cons. Disc.	Auto parts, PT +16.8%	None in window	Reject
NAVI	Financials	Student lending	None	Reject
GNW	Financials	Mortgage/LTC insurance	None	Reject
ITGR	Healthcare	Medical device CDMO	Earnings Oct 22 (outside)	Reject

Why each was rejected

- NAVI -- disqualified outright. Revenue TTM ?42.8%, net income ?\$49M, Hold rating with PT \$9.07, 5.8% BELOW the price. Shrinking revenue is this book's single strongest disqualifier.
- DAN -- earnings quality fails. Revenue +3.7%, and forward PE 8.96 against trailing 3.09 -- the \$1.12B net income is a one-off rolling off, so the "PE 3" is an illusion. Same profile that disqualified PD twice. Beta 2.00.
- GNW -- unratable. No analyst coverage (rating n/a, PT n/a), so conviction cannot exceed 2/5 under the screener rule. Revenue +1.7%, trading 3% below its 52-week high.
- ITGR -- Hold with PT below market. \$126.50 against PT \$121.80 (?3.7%), sitting at its 52-week high, revenue +2.7%, earnings Oct 22 -- after the finish.
- KFY, EPC, ANAB, OGN, ATAI, BRBS, NMIH, CFFN, FBRT -- not advanced: 20-day momentum of +1% to +6% with no dated catalyst inside a 9-session runway. In this window those are index proxies carrying single-stock risk.

Selected: VTS -- Vitesse Energy | Conviction 4/5

PRV, 9/04 close + AH 7:30 PM EDT: \$17.78 close, after-hours \$17.85 (+0.39%). Market cap \$748.61M. Revenue TTM \$258.95M, +7.9%. Net income ?\$11.25M (EPS ?\$0.28). Buy, PT \$21.00 (+18.1%). Beta 0.63. 52-week range \$15.00-26.27 -- 32% below its high. ADV \$7.8M.

Thesis-input freshness -- the driver verified, current and rising:

WTI crude	\$92.45	+7.8%	+12.6%
Brent	\$97.07	+7.3%	+10.7%
XLE	\$64.06	+2.2%	+11.4%

Weekly WTI closes: 82.40 -> 87.06 -> 83.40 -> 91.48 -> 92.45. The LXU rule voids a thesis whose driver has fallen ≥ 3 consecutive weeks; this driver is rising into the entry, which is the mirror image of that failure.

Entry-discipline checks -- all pass: +5.0% over the 20-day SMA (limit $\leq 20\%$) · +10.0% over the 50-day (limit $\leq 40\%$) · not days 1-3 of a breakout · earnings Aug 3, long past · ADV \$7.8M against a \$107 order -- immaterial.

Why it fits this specific week: ATR is just 2.33% -- the lowest-volatility name on the screen. With the gap at 20.35% and 9 sessions left, a low-beta (0.63) energy name with a rising driver adds exposure without adding the variance that could turn a near-tie into a clear loss. It also fills the empty Energy sector.

Bear case, stated plainly:

The oil market
can unwind

5. TYRA -- the binary I am declining, and why

TYRA is the only candidate on the entire screen with a dated catalyst inside the window, which is exactly what the 5-day timing directive asked for. It deserves a full account rather than a one-line rejection.

The setup: On Sept 4 the company announced a conference call for initial results of oral dabogratinib from the SURF302 Phase 2 study in IR NMIBC, on September 9, 2026 -- two sessions away. The stock closed +15.25% at \$28.65 on 1.86M shares, with after-hours \$29.30. Strong Buy from 15 analysts, PT \$50.82 (+77%). Beta 0.73, ADV \$13M. It sits 21.4% below its 50-day SMA and 29.5% below its 52-week high, so it is a depressed name bouncing, not an extended one.

Sizing, if taken: 4 shares = \$114.60 = 14.8% of equity, just inside the 15% binary cap.

Why I am declining it:

A stop cannot protect a binary. Phase 2 oncology readouts gap. If the data disappoints, TYRA opens 30-40% lower and the stop fills far below its level. The protection this book relies on simply does not function here -- at 4 shares a 35% gap costs \$40 (25.2% of equity), turning a 20.35% gap into roughly 25.5% with 7 sessions left. Unrecoverable.

I have not
may rise or
about the

This is your call, not mine, and you have overridden me correctly before. If you want it, the order is: BUY 4 TYRA, limit \$29.30 (the last verified AH print), stop \$24.10 -- below the 10-day low of \$24.17 -- with the understanding that the stop is decoration against a gap. Under the pre-catalyst exit rule, also set a +30% alert at \$38.10 and, if it triggers, cancel the stop and sell ~1/3 into the spike.

6. PORTFOLIO ACTIONS

Keep: ATRC (5/5), PAR (4/5), CADL (3/5) -- no thesis has broken.

Add to: no
share but

On the unused fifth slot: you authorized up to two new names and I am taking one. The screen did not produce a second that survives its own filters -- NAVI's revenue is shrinking 42.8%, DAN's earnings base is evaporating, GNW has no coverage, ITGR's target is below its price. Forcing a second position to satisfy a directive would be the exact failure this book has documented repeatedly. Holding \$165 rather than buying the sixth-best name on a weak screen is the disciplined answer, and portfolio_rules.md says so directly: if no candidates pass all filters, hold cash and explain why.

7. EXACT ORDERS

Order 1 -- BUY VTS

- Action: BUY
- Ticker: VTS -- Vitesse Energy (NYSE)
- Shares: 6
- Order Type: LIMIT
- Limit Price: \$17.85
- Time in Force: DAY
- Intended Execution: 2026-09-08 (Tuesday)
- Stop-Loss: \$16.65 -- below the 10-day low of \$16.69; 2.73xATR below entry
- Stop-Limit: \$16.50
- Special Instructions: The limit equals the last verified price -- \$17.85 after-hours, Sept 4, 7:30 PM EDT; no Tuesday pre-market exists yet with markets closed today. Do not chase above \$18.30 -- WTI rose ~1% while equities were shut, so VTS may gap; if it opens above that, stand down and I will reprice against a live pre-market quote in Tuesday's daily. Skip condition: do not buy if VTS opens below \$16.94 (its 20-day SMA), which would void the setup.
- Rationale: Only candidate passing every filter -- revenue +7.9%, Buy with +18.1% upside, 32% below its 52-week high, filling the empty Energy sector, on a driver verified rising (+12.6% in 20 days), at the lowest ATR on the screen (2.33%).

No other orders. Stops unchanged: ATRC \$48.50/\$48.35 · PAR \$17.05/\$16.90 · CADL \$12.35/\$12.20.

8. RISK AND LIQUIDITY CHECKS

Post-trade allocation (VTS at \$17.85 x 6 = \$107.10):

Holding	Value	% Equity
PAR	\$217.47	28.2%
ATRC	\$154.56	20.0%
CADL	\$127.80	16.6%
VTS (new)	\$107.10	13.9%
Cash	\$165.07	21.4%
TOTAL	\$772.00	100%

All under the 30% ceiling [OK] · Cash above the 8% floor (\$61.76) [OK] · 4 of 5 positions [OK]

Sector: Technology 1 (PAR) · Healthcare 2 of 3 (ATRC, CADL) · Energy 1 (VTS, new) · Consumer Discretionary 0 [OK]

Risk per position if stopped:

Holding	Shares	Price ? Stop	Max loss	% Equity
ATRC	3	\$51.52 ? \$48.50	\$9.06	1.17% [OK]
PAR	11	\$19.77 ? \$17.05	\$29.92	3.88% [OK]
CADL	10	\$12.78 ? \$12.35	\$4.30	0.56% [OK]
VTS	6	\$17.85 ? \$16.65	\$7.20	0.93% [OK]
Aggregate			\$50.48	6.54%

Every position within the 5% risk-per-trade limit. Liquidity: a \$107 order against \$7.8M ADV is 0.0014% -- immaterial, far inside the 10%-of-ADV slippage guard.

9. MONITORING PLAN

Holding	Watch	Trigger
ATRC	+60% partial at \$54.88 -- 6.5% away. If reached, run all four deferral criteria	Stop \$48.50 = +41.4% realised. My lean is to take the partial rather than defer
PAR	Largest position (28.2%), best fundamentals, \$14 from the 30% cap -- the cap will	Stop \$17.05. A break below \$18.50 on volume is the warning
CADL	Likeliest exit at ~0.5xATR. Restoration allowance still unused if it drifts furt	Stop \$12.35 = +8.0% realised
VTS	Oil is the whole thesis. A US/Iran de-escalation headline unwinds the war premiu	Ex-dividend Sept 15 -- expect a ~\$0.44 price drop the ledger will not credit. Do
Book	IWM vs its 50-day; XBI for CADL	Regime was RISK-OFF at Friday's close

Calendar to the finish: no holding reports earnings before 9/18. The only dated events are VTS ex-dividend (Sept 15) and, if taken, TYRA's SURF302 readout (Sept 9).

10. CONFIRM CASH AND CONSTRAINTS

Cash: \$272.17 -> \$165.07 after the VTS purchase -- 21.4% of equity, above the 8% floor.

Constraint	Status
Cash floor >=8%	[OK] 21.4%
Single-name <=30%	[OK] largest PAR 28.2%
Max 5 positions	[OK] 4 held
Risk-per-trade <=5%	[OK] largest PAR 3.88%
Sector cap	[OK] Healthcare 2/3, Tech 1, Energy 1
Market cap <=\$5B	[OK] VTS \$749M
Excluded classes	[OK] all common stock
Stops on all longs	[OK] four live stops
Full shares	[OK]
PRV gate	[OK] 3 holdings + 6 candidates browser-verified 21:25-21:40

	EDT
Thesis-input freshness	[OK] oil verified current and rising
Binary event cap	[OK] none taken

All constraints satisfied. One order for execution on 2026-09-08.

Week 52 Full Report -- the final scheduled research window. Generated 2026-09-07 by Claude Code. Posture: Aggressive · Wide net · 5-day catalyst window · max 5 positions · hold through the 9/18 close. All prices are 9/04 settled closes plus verified after-hours prints; ATR and range figures computed from settled bars through 2026-09-04.
