

Week 50 Deep Research -- Micro-Cap Portfolio

Date: Monday, 2026-08-24 | Week: 50 of 52 | Runway: ends 2026-09-18 (~3.5 weeks)

Session d

1. RESTATED RULES

- Universe: US-listed common stock, market cap $\leq$ \$5B (amended Week 49 from \$2B). No ETFs, CEFs/BDCs, SPACs, ADRs, units/warrants.
- Cash floor: 15% of equity -- UNCHANGED and explicitly reaffirmed in the Week 49 amendments. This is the binding constraint this week (see §7).
- Risk-per-trade: size so a stop-out costs $\leq$ 5% of equity. Single-name ceiling: 30% of equity.
- Stops mandatory on every long, default $\max(1.5 \times \text{ATR}(14), 10\% \text{ below entry})$. Never lowered.
- Range check before any stop level: must sit below the most recent session's low AND $\geq 1.5 \times \text{ATR}$ below the reference price (target 1.75x). De-risk by cutting size, never by tightening into the noise band.
- Sector cap: max 2 positions per GICS sector; healthcare amended to 3 (Week 49).
- PRV gate: browser-fetch the live quote page + news feed before ANY buy/sell/trim/add. Applies equally to exits.
- Entry discipline: post-earnings cooldown, $\leq 40\%$ above 50-day SMA, $\leq 20\%$ above 20-day SMA, thesis-input freshness, screener score = sourcing not conviction (starts 2/5).
- Partial profits: $\sim 1/3$ at +30%, $\sim 1/3$ at +60%; deferrable when all four criteria hold.
- Full shares only. No averaging down $> 5\%$ below entry without a confirmed new catalyst (≥ 2 sources).

2. RESEARCH SCOPE

Data retrieved Monday 2026-08-24, 07:00-07:25 AM EDT (pre-market).

Check	Method	Result
Settled OHLC/volume	trading_script.py daily run (yfinance), through Fri 2026-08-21	Complete
ATR(14), swing lows, SMA20/50	Computed locally from 6-month price history	Complete -- never estimated by eye
PRV quote pages -- all 4 holdings	Browser -> stockanalysis.com	TILE, ATRC, PAR, CADL
PRV quote pages -- 6 candidates	Browser -> stockanalysis.com	WWW, SIBN, ABUS, BEAM, CYRX, PD
News-feed recency	Browser -> stocktitan.net	ATRC, WWW
Screener universe	screener.py -> Finviz + yfinance	1,604 names; 395 dropped by validation; 15 ranked

Data-integrity notes:

- The Finviz parse arrived corrupted again -- 100% of tickers had a doubled first character. `_repair_ticker_corruption()` detected and repaired it automatically. The screener output is sound.
- My local 52-week ranges were computed over a 6-month window and are wrong as "52-week" figures. Every 52-week range quoted below comes from the browser quote page, which is authoritative. (WWW: local calc said \$14.00-21.41; the real range is \$13.47-32.80 -- a material difference that changes how the setup reads.)
- A staleness bug in the make weekend gate blocked the first run: it demanded data for today's session while the market was still closed. Fixed in the script (§ Addendum).

The PRV gate produced one decision-changing find this morning -- see ATRC below.

3. CURRENT PORTFOLIO ASSESSMENT

Equity \$781.68 · Cash \$191.44 (24.5%) · S&P-equivalent \$770.27 · Gap +1.48% · TWR alpha +7.91%

Ticker	Role	Entry Date	Avg Cost	Current Price	Current Stop	Conviction	Status
ATRC	Core winner	2026-07-15	\$34.30	\$48.98 (+42.8%)	\$44.20	5/5	KEEP -- raise stop
TILE	Core	2026-06-30	\$32.10	\$38.94 (+21.3%)	\$37.10	4/5	KEEP -- stop already at limit
PAR	Growth	2026-08-17	\$18.85	\$19.53 (+3.6%)	\$16.50	4/5	KEEP -- raise stop
CADL	Catalyst	2026-08-17	\$11.43	\$13.13 (+14.9%)	\$12.00	3/5	KEEP -- stop at ATR floor

ATRC -- AtriCure | Conviction 5/5 (raised from 4/5)

PRV, 8/24 07:00 AM EDT: \$48.98 close, pre-market \$48.98 (0.00%, no meaningful volume). Market cap \$2.49B. Revenue TTM \$569.62M +13.9%. Net income \$10.55M, EPS \$0.21. PE 232.32 / forward PE 199.35. 52-wk range \$25.36-49.20 -- the stock closed at its 52-week high. Beta 1.23. Consensus Buy, PT \$47.33 (?3.37%, i.e. BELOW the current price).

The find: posted 18 minutes before my fetch -- "AtriCure price target raised to \$55 from \$45 at BTIG," Buy maintained, on the reasoning that a new STS (Society of Thoracic Surgeons) Quality Metric could increase use of concomitant ablation. This is a Monday pre-market upgrade on a structural adoption driver, and it was invisible in Friday's settled data. Consensus PT \$47.33 predates it and will pull upward as it refreshes.

Seven consecutive up sessions (\$42.95 -> \$48.98, +14%) with perfectly stair-stepped rising lows (41.65 -> 46.99). News feed clean since 7/27 -- no adverse company release.

Partial-profit deferral (+30% trigger \$44.59) -- re-affirmed. All four criteria hold: (1) new catalyst -- FY EPS guidance doubling from the Q2 print, now reinforced by the STS metric; (2) trailing stop locks +33.7% at the new level, far above the +15% requirement; (3) position 18.8% of equity, under the 30% cap; (4) conviction 5/5. Per the rule, the trailing stop replaces the partial sell as the primary risk control. Selling a third of a three-share position into a fresh upgrade would be the exact error this book keeps flagging in reverse.

Honest counterweight: PE 232 and a consensus PT below the price are real. The stop, not the story, is what protects this gain.

TILE -- Interface | Conviction 4/5

PRV, 8/24: \$38.94 close, pre-market \$39.20 (+0.67%) 4:00 AM. Revenue TTM \$1.44B +6.5%; net income \$145.55M +52.0%; EPS \$2.47 +52.5%. PE 15.77, forward PE 16.20. 52-wk \$24.40-40.50. Beta 1.91. Strong Buy, PT \$45.25 (+16.2%). Sector: Consumer Discretionary (not Industrials -- corrected from prior weeks).

Thesis intact: earnings growing five times faster than revenue, i.e. genuine margin expansion. Forward PE slightly above trailing is the one soft spot -- the market expects earnings growth to slow from here.

Stop stays \$37.10. See §5 for why tightening is rejected.

PAR -- PAR Technology | Conviction 4/5

PRV, 8/24: \$19.53 close, pre-market \$19.53 (4:01 AM -- session open, no meaningful volume; not a usable quote). Revenue TTM \$496.67M +18.8% -- the strongest top-line growth in the book. Net income ?\$72.14M, EPS ?\$1.77 (still GAAP-lossmaking). Forward PE 17.82. 52-wk \$11.59-54.62 -- 64% below its high. Beta 1.31. Buy, PT \$25.31 (+29.6%) -- the largest verified upside among holdings. No adverse news; latest item is a 5-day-old marketing survey release.

The Week 49 thesis is delivering: +3.6% in four sessions, closed Friday +3.06% at \$19.53.

CADL -- Candel Therapeutics | Conviction 3/5

PRV, 8/24 07:12 AM EDT: \$13.13 close (+6.32% Friday), pre-market \$12.85 (?2.17%) -- giving back part of Friday's pop. Market cap \$1.00B. No revenue; net income ?\$88.53M, EPS ?\$1.44. 52-wk \$4.35-13.82 -- near the high. Beta ?0.50. Strong Buy, PT \$20.88 (+59.0%) -- the largest upside on the board.

A caution the headline hides: the most recent analyst action is BofA raising its PT to \$12 from \$9 -- but keeping a Neutral rating, and \$12 sits BELOW Friday's \$13.13 close. The Strong Buy consensus is real, but the marginal analyst is not bullish at this price. Conviction stays 3/5.

Clinical-stage binary: CAN-2409 BLA submission guided Q4 2026, cash into 2028. This is the most likely stop-out in the book this week -- the \$12.00 stop sits only 1.13xATR below the \$12.85 pre-market print.

4. CANDIDATE SET

All six evaluated through the full PRV gate -- live quote page fetched for every name, not merely searched.

Ticker	One-Line Thesis	Key Catalyst	Confirmation Status	Liquidity
WWW	Profitable footwear recovery: Merrell +11.1%, Saucony +9.9%, guidance raised on	Post-print drift on a raised FY guide; KeyBanc PT \$25 (Overweight)	CONFIRMED -- Q2 release 8/13 verified on StockTitan; quote page verified 8/24	~\$14M/day ADV -- ample
SIBN	SI-Bone: sacroiliac medtech, revenue +15.3%, beta 0.70, fresh breakout on 2.9x v	No dated catalyst inside window (earnings were 8/3)	Verified, but no near-term catalyst	~\$25M/day -- ample
CYRX	Cryoport: cold-chain logistics for cell/gene therapy, revenue +12.1%	Q2 beat (8/6), Needham PT \$19	Verified	~\$17M/day -- ample
ABUS	Arbutus: \$230M Dutch auction tender = 22% of market cap	Tender in progress	Verified but unrateable	~\$94M/day -- ample
BEAM	Beam Therapeutics: base-editing platform, PT \$52.15 (+75%)	Pipeline readouts, no dated event in window	Verified	~\$73M/day -- ample
PD	PagerDuty: incident-management software	Earnings Aug 27 (3 days)	Verified -- and disqualifying	~\$27M/day -- ample

Why each non-selected candidate was rejected

- PD -- DISQUALIFIED on fundamentals, despite being the only name with a catalyst inside the 5-day window. Consensus Hold, PT \$10.14 = 17.7% BELOW the \$12.32 price; revenue TTM +3.7% (near-stagnant); forward PE 9.41 vs trailing 5.82 -- forward above trailing means earnings are expected to fall, and the \$190.6M net income looks like a one-off tax item, not operations. Buying a Hold-rated stock trading 21% above consensus PT three days before it prints is a negative-skew coin flip. The screener ranked it #5 on momentum; momentum is sourcing, not conviction.

- SIBN -- the runner-up, and genuinely close. Beta 0.70, Strong Buy, PT \$25.00 (+25.3%), revenue +15.3%, clean rising-lows base, Friday breakout on 2.9x average volume. Rejected on two grounds: it is lossmaking (EPS ?\$0.33) where WWW earns \$1.28, and it would make healthcare 3 of 5 positions alongside ATRC -- another medical-device name, i.e. directly correlated

exposure -- which is the opposite of what a protect-the-lead posture wants in the final three weeks.

- CYRX -- rejected on risk/reward. PT \$19.33 is only +12.8% upside, and the stock closed at its 52-week high (\$17.20 = the day's high). Lossmaking (EPS ?\$0.91), beta 1.89. Paying a 52-week high for 12.8% of analyst headroom is a poor trade.
- ABUS -- rejected as unratable. No analyst coverage at all (rating n/a, PT n/a), so there is no verifiable upside target and conviction cannot rise above 2/5 under the screener rule. The +1,078.8% "revenue growth" is a litigation windfall, not operations. The \$230M Dutch auction is a special situation whose risk I cannot size without the tender range -- and post-tender, the technical support disappears.
- BEAM -- rejected on portfolio shape. Beta 2.21, the highest on the board, clinical-stage, and directly correlated with CADL's XBI exposure. The +75% PT is attractive, but stacking a second high-beta clinical binary while the directive is to tighten stops is incoherent risk management.
- ELME, FBRT, BKKI, NVAX, HNI, GEO, ANY, RXRX, IRD, VIR (ranks 6-15) -- not advanced: ELME/FBRT are yield-driven real estate with ~0% relative strength; ANY is a \$24M nano-cap below any workable liquidity floor for a real position; the remainder are additional healthcare names blocked by the same concentration logic that rejected SIBN and BEAM.

Selected: WWW -- Wolverine World Wide | Conviction 4/5

PRV, 8/24 07:15 AM EDT: \$20.96 at close 8/21; after-hours \$21.04 (+0.38%) at 7:30 PM EDT 8/21. No Monday pre-market print yet at fetch time. Market cap \$1.72B. Day range \$20.32-21.08. Volume 662,720.

The fundamentals -- the only candidate that is profitable AND growing on every line:

- Revenue TTM \$1.95B, +7.2%
- Net income \$105.60M, +28.3%
- EPS \$1.28, +25.3%
- PE 16.40 -> forward PE 11.91 -- forward materially below trailing, the signature of expected earnings growth (the mirror image of PD's profile)
- 52-wk \$13.47-32.80 -- trading 36% below its 52-week high: a recovery, not an extension
- Beta 1.74 · Dividend \$0.40 (1.91%) · Buy, PT \$24.30 (+15.9%)

Q2 print (8/13), verified on StockTitan: revenue \$506.4M +6.8%; Merrell +11.1%, Saucony +9.9%; gross margin 46.5% (?70bps on US tariffs) but operating margin improved to 9.3%; adjusted EPS \$0.40 vs \$0.38 consensus; inventory ?17%, net debt ?22%. FY guidance raised to \$1.98-2.00B revenue, 9.5% operating margin, EPS \$1.48-1.58. Analyst response: KeyBanc PT \$25 from \$20 (Overweight); Williams Trading \$20 from \$17 (Hold).

The gate condition set in Week 49 has been met. WWW was deliberately passed over last week at day 2 of a +16.4% move and queued #1 "on a higher-low base or a pullback toward the ~\$19.35 20-day SMA." Five sessions later:

Date	Low	Close	Volume
8/14	19.93	21.03	1,304,600
8/17	19.38	19.83	1,145,500
8/18	19.88	19.99	1,122,600
8/19	20.08	20.85	725,600
8/20	19.85	20.45	700,100
8/21	20.32	20.96	662,700

Lows stepped 19.38 -> 19.88 -> 20.08 -> 19.85 -> 20.32 (one shallow dip), price consolidated in a 19.38-21.08 range for five sessions, and volume declined the whole way through the base (1.30M -> 0.66M) before Friday's close reclaimed the range top and still sits below the 8/14 intraday high of 21.26. That is textbook constructive consolidation, not distribution. The patience was rewarded: the stock is 0.4% below where I declined to chase it, after building a base underneath.

Entry-discipline checks -- all pass:

- Post-earnings cooldown: 6 sessions past the 8/13 print (rule requires >3, prefers >=1 week) [OK]
- Distance from 20-day SMA (\$19.74): +6.2% (limit <=20%) [OK]
- Distance from 50-day SMA (\$18.47): +13.5% (limit <=40%) [OK]
- Not days 1-3 of a breakout [OK]
- Liquidity: ~\$14M/day ADV, far above the \$1M full-sizing threshold [OK]

Thesis-input freshness: the live external driver is US footwear tariffs, which cost 70bps of gross margin in Q2. Critically, the thesis does not require tariff relief -- management raised full-year guidance with the tariff drag already in the numbers. The thesis rests on brand momentum (Merrell/Saucony ~+10%) and balance-sheet repair (inventory ?17%, net debt ?22%), both dated 8/13, inside the 10-trading-day window. This is the structural test the LXU failure taught: a thesis is void when it depends on a driver that is reversing. WWW's does not.

Bear case: Beta 1.74 -- it will fall harder than the book in a market drawdown, which matters with three weeks left. Tariffs remain a live margin headwind. Sweaty Betty (?2.4%) and Work Group (?1.6%) are shrinking; growth is carried by two brands. At 36% below its 52-week high, this is a repair story, not a leader -- the same shape as PAR. And, honestly, there is no dated catalyst inside the 5-day window -- this is post-earnings drift on a raised guide, which is a weaker reason to act than a scheduled event.

5. PORTFOLIO ACTIONS

Keep:

- ATRC -- 5/5. Fresh BTIG PT \$55 (+12%) on the new STS Quality Metric, landed pre-market today. Partial-profit deferral re-affirmed on all four criteria; the raised stop is the risk control.
- TILE -- 4/5. Strong Buy, PT \$45.25 (+16.2%), EPS +52.5%. Thesis intact.
- PAR -- 4/5. Revenue +18.8%, PT \$25.31 (+29.6%). Highest verified upside in the book.
- CADL -- 3/5. Strong Buy, PT \$20.88, but the marginal analyst (BofA) is Neutral at \$12, below the market. Riding a locked +5.0% into the Q4 BLA catalyst.

Trim: none. The ATRC +30% partial stays deferred (criteria in §3); a 1-of-3-share trim into a fresh upgrade is high-friction and rule-inconsistent.

Exit: none. No stop breached, no thesis broken.

Initiate:

- WWW -- 3 shares @ limit \$21.10 -- the only candidate that is profitable, growing, and cheap on forward earnings; fills the Week 49 queue on a met gate condition. Size is capped at 3 shares by the 15% cash floor, not by conviction (see §7).

Stop changes -- and two deliberate refusals

The "tighten stops" directive means tighten by one ATR. Applied mechanically to all four holdings, the range check rejects two of them -- a stop above the most recent session's low is inside normal noise and must be refused. This is the ARDT lesson, applied prospectively rather than after the fact.

Ticker	Current	One-ATR tighten	Friday's low	Verdict
ATRC	\$44.20 (2.84xATR)	\$45.85 (1.86xATR)	\$46.99	[OK] APPLY -- clears the low, locks +33.7%
PAR	\$16.50 (2.97xATR)	\$17.50 (1.99xATR)	\$18.80	[OK] APPLY -- clears the low, cuts max loss from ?12.5% to ?7.2%
TILE	\$37.10 (1.24xATR)	\$38.58 (0.24xATR)	\$38.55	[X] REFUSED -- sits above Friday's low; and \$37.10 is already tighter than the 1
CADL	\$12.00 (1.51xATR)	\$12.75 (0.51xATR)	\$12.38	[X] REFUSED -- sits above Friday's low; \$12.00 is already exactly at the 1.5xATR

TILE and CADL cannot be tightened because they are already at or inside the ATR guideline. Forcing the directive onto them would convert two working thesis-stops into coin flips -- which is precisely how ARDT was lost at the exact low of the day on 8/21 before recovering 6.2% into the close.

6. EXACT ORDERS

Order 1 -- BUY WWW

- Action: BUY
- Ticker: WWW (Wolverine World Wide, NYSE)
- Shares: 3
- Order Type: LIMIT
- Limit Price: \$21.10
- Time in Force: DAY
- Intended Execution: 2026-08-24 (Monday)
- Stop Loss: \$19.30 -- below the \$19.38 swing low of 8/17 (the base floor) and 1.88xATR below the limit, satisfying the 1.75xATR target
- Stop Limit: \$19.15
- Special Instructions: Skip condition -- do not buy if WWW opens below \$19.74 (the 20-day SMA), which would void the higher-low base the entry depends on. No Monday pre-market print existed at 07:15 AM; the limit is set \$0.06 above the last verified price of \$21.04 (after-hours, Aug 21, 7:30 PM EDT) and \$0.14 above the \$20.96 close, allowing for a modest gap. If WWW gaps above \$21.30, do not chase -- stand down and re-evaluate Tuesday.
- Rationale: Only candidate profitable and growing on every line (EPS +25.3%, forward PE 11.91 vs trailing 16.40) with a raised FY guide, entered on a five-session consolidation with declining volume, 36% below its 52-week high.

Order 2 -- RAISE STOP, ATRC

- Action: MODIFY existing stop (no share change)
- Ticker: ATRC
- Shares covered: 3 (full position)
- Stop Loss: \$45.85 (from \$44.20)
- Stop Limit: \$45.70 (from \$44.05)
- Time in Force: GTC
- Order-side check: run against \$48.98 (close, Aug 21 4:00 PM EDT; pre-market \$48.98 unchanged at 07:00 AM Aug 24). Stop is 6.4% below the last verified price [OK]
- Range check: 1.86xATR(14) below price (ATR \$1.681 = 3.43%); below Friday's low of \$46.99 [OK]
- Rationale: Locks +33.7% from the \$34.30 entry, up from +28.9%, while preserving nearly two ATRs of room for a name that just received a \$55 price target.

Order 3 -- RAISE STOP, PAR

- Action: MODIFY existing stop (no share change)
- Ticker: PAR
- Shares covered: 8 (full position)
- Stop Loss: \$17.50 (from \$16.50)
- Stop Limit: \$17.35 (from \$16.35)
- Time in Force: GTC
- Order-side check: run against \$19.53 (close, Aug 21 4:00 PM EDT). Stop is 10.4% below [OK]
- Range check: 1.99xATR(14) below price (ATR \$1.021 = 5.23%); below Friday's low of \$18.80 and the 5-day low of \$18.18 [OK]

- Rationale: Cuts the worst case from 12.5% to 7.2% of the position, removing ~\$10 of tail risk with a stop that still sits two ATRs away.

No stop change for TILE (\$37.10/\$36.95) or CADL (\$12.00/\$11.85) -- both already at or inside the 1.5xATR floor; tightening is refused by the range check.

7. RISK AND LIQUIDITY CHECKS

The binding constraint this week is the cash floor, not conviction

Equity	\$781.68
Cash	\$191.44 (24.49%)
15% cash floor	\$117.25
Deployable	\$74.19

At a \$21.10 limit that funds 3 shares (\$63.30). Four shares would leave cash at 13.69% -- a floor violation. Meanwhile risk-per-trade would permit 21 shares -- so the position is roughly one-seventh the size the risk budget allows.

This is worth naming plainly: with \$74 deployable, a new position is a stub that will move the final gap by well under a percentage point. The 15% cash floor was explicitly reaffirmed as unchanged in the Week 49 amendments, so I am not going to quietly reinterpret it -- but if you want fuller deployment for the last three weeks, amending the floor is a decision available to you, exactly as the healthcare cap and market-cap ceiling were amended in Week 49. I am not recommending it: at Week 50 with a lead to protect, cash is a legitimate defensive asset, and the floor is doing real work.

Post-trade concentration

Holding	Value	% Equity
TILE	\$155.76	19.93%
PAR	\$156.24	19.99%
ATRC	\$146.94	18.80%
CADL	\$131.30	16.80%
WWW (new)	\$63.30	8.10%
Cash	\$128.14	16.39% [OK]
Total	\$781.68	100%

All five positions under the 30% single-name ceiling [OK] · Cash above the 15% floor [OK]

Sector cap (GICS, per quote pages)

Sector	Positions	Cap	Status
Consumer Discretionary	TILE, WWW	2	[OK] at cap
Healthcare	ATRC, CADL	3 (amended)	[OK] under
Technology	PAR	2	[OK] under

Correction carried forward: TILE is Consumer Discretionary, not Industrials as earlier reports assumed. Adding WWW therefore consumes the Consumer Discretionary cap -- which is a further reason SIBN's healthcare concentration was the wrong direction, but also means no third Consumer Discretionary name can be added in Week 51.

Risk per position (loss if stop fires)

Holding	Shares	Price ? Stop	Max loss	% Equity
ATRC	3	\$48.98 ? \$45.85	\$9.39	1.20% [OK]
TILE	4	\$38.94 ? \$37.10	\$7.36	0.94% [OK]
PAR	8	\$19.53 ? \$17.50	\$16.24	2.08% [OK]
CADL	10	\$13.13 ? \$12.00	\$11.30	1.45% [OK]
WWW	3	\$21.10 ? \$19.30	\$5.40	0.69% [OK]
Aggregate			\$49.69	6.36%

Every position within the 5% risk-per-trade limit. Aggregate simultaneous-stop-out risk is 6.36% of equity -- acceptable, and the positions are not tightly correlated.

Liquidity

WWW ADV ? 662K-1.3M shares (~\$14-27M/day). A 3-share order is ~0.0004% of ADV -- immaterial. Every holding trades well above the \$1M/day full-sizing threshold.

8. MONITORING PLAN

Holding	Watch for	Trigger
CADL	Highest stop-out probability in the book. Pre-market \$12.85 is only 1.13xATR abo	If stopped at \$12.00, that is +5.0% realized -- accept it, do not re-enter. Watc
ATRC	Whether the BTIG \$55 target draws follow-on upgrades and lifts the \$47.33 consen	If \$54.88 is reached, re-run the four deferral criteria fresh -- at that level t
PAR	Holding the \$18.38 higher-low. Any move toward the \$25.31 PT.	Below \$18.18 (5-day low) on volume = thesis-crack warning, well before the \$17.5
TILE	Ex-dividend Sep 4. Forward PE (16.20) above trailing (15.77) signals deceleratin	A close below \$38.55 would be the first lower low since the run began.
WWW	Whether the base holds. Tariff commentary from peer footwear/apparel names.	Day-1 drawdown rule applies: if WWW closes ?8% or worse on entry day with no pos
Book	IWM (\$299.96) and XBI (\$165.73) -- both rose Friday. Broad risk-on supports four	A market break hits WWW (? 1.74) and TILE (? 1.91) hardest.

Calendar: PD reports 8/27 (not held -- relevant only as a read on software sentiment). No holding reports earnings before the experiment ends; all four printed in August. This means the remaining three weeks are drift-and-stop management, not event trading -- which is why the stop levels in \$6 are the most consequential decisions in this report.

9. THESIS REVIEW SUMMARY

(Reproduced verbatim as Week 50 Summary.md)

10. CONFIRM CASH AND CONSTRAINTS

Cash: \$191.44 -> \$128.14 after the WWW purchase (\$63.30). 16.39% of equity -- above the 15% floor.

Constraint	Status
Cash floor >=15%	[OK] 16.39% (binding -- capped the WWW size at 3 shares)
Single-name <=30%	[OK] largest is PAR at 19.99%
Max 5 concurrent positions	[OK] exactly 5 after the initiation
Risk-per-trade <=5%	[OK] largest is PAR at 2.08%
Sector cap (2, healthcare 3)	[OK] Cons Disc 2, Healthcare 2, Tech 1
Market cap <=\$5B	[OK] WWW \$1.72B; largest holding ATRC \$2.49B
Excluded security classes	[OK] all common stock
Stops on all longs	[OK] five stops, all order-side and range checked
Full shares only	[OK]
No averaging down	[OK] no adds to losing positions
PRV gate	[OK] all 4 holdings + all 6 candidates browser-verified 8/24 07:00-07:25 EDT
Post-earnings cooldown	[OK] WWW 6 sessions past its print
Distance-from-base	[OK] WWW +6.2% over SMA20, +13.5% over SMA50
Thesis-input freshness	[OK] WWW's tariff driver verified as a headwind already absorbed into raised gui

All constraints satisfied. Three orders for execution at the broker on 2026-08-24.

Addendum -- Script fix applied this session

The first make weekend run aborted with "Portfolio data is not current for the last trading day" even though Friday 8/21 data was present. The gate computed the required session as the last NYSE session including today, so running Monday at 07:18 AM demanded data for a session that had not opened yet -- the workflow was structurally unrunnable before any Monday close.

Fixed in the script rather than worked around: added `last_completed_session()` to `trading_script.py`, which returns the most recent session whose 16:00 ET close has actually passed, plus a `--check-data-current` flag. The Makefile now calls that instead of an inline shell-Python one-liner that had an `exec()-inside-a-c-string` fallback. Verified across five timestamps, including both sides of the 4 PM boundary.

Week 50 Full Report -- generated 2026-08-24 by Claude Code. Posture: Tighten stops · Wide net · 5-day catalyst window · max 5 positions. All prices browser-verified pre-market 2026-08-24; all ATR and range figures computed from price history.
